Experience

Software Developer

R&R Construction Services - FEBRUARY 2025 - MAY 2026

PRETORIA, CENTURION

Developed custom web solutions for construction operations, enhancing project management efficiency. Collaborated with business stakeholders to align software design with real-world workflows. Visited construction sites to gather insights for improved operational tracking solutions. Designed software to address contractor requirements, boosting visibility and operational efficiency.

- Executed onsite operational analysis to evaluate construction workflows and contractor activities while identifying daily operational challenges.
- Reviewed fieldwork practices to translate operational requirements into optimized software functionality.
- Assisted in creation of tailored construction operations and management systems aimed at centralizing project client jobs and operational information.
- Constructed dynamic web interfaces and modular application components through Angular and

TypeScript.

- Developed backend services and RESTful APIs utilizing C# ASP.NET Core and .NET, implementing business logic and application workflows.
- Implemented and synchronized database functionality leveraging SQL Server and Entity Framework.
- Established functionality streamlining client projects, job roles, user interactions, and operational insights.
- Worked with business stakeholders to identify operational requirements and convert them into technical solutions.
- Analysed workflows to identify opportunities where software could reduce manual processes, improve tracking and increase operational visibility.
- Identified and addressed problems throughout frontend, backend, API, and database layers.

IT Business Analyst > Software Developer

Boffin & Fundi - OCTOBER 2022 - DECEMBER 2024

PRETORIA, CENTURION

Business Analysis - Municipal Town Planning System

Collaborated on business analysis, system analysis, software testing, municipal end-user support, and software development, advancing from junior IT business analyst role to software development position.

- Worked as part of a stakeholder support and business analysis team responsible for validating, testing and supporting a municipal Town Planning System developed by external software vendors for municipal environments, including the City of Ekurhuleni Municipality.
- Engaged in daily stand-up meetings with business stakeholders, municipal representatives, and external development teams via Microsoft Teams.
- Analyzed business requirements, relayed issues, and oversaw system modifications in collaboration with

stakeholders and external developers.

- Reviewed system capabilities aligned with documented business specifications and operational procedures.
- Detected functional defects, assessed validation issues, corrected spelling errors, optimized workflow problems, and mitigated business-rule inconsistencies.
- Examined instances of functionality implementation that did not align with specified business rules.
- Facilitated user acceptance testing (UAT), functional testing, and regression testing on revised releases ahead of production deployment.
- Analyzed logical and technical issues to identify potential root causes and proposed solutions.
- Delivered onsite end-user support and troubleshooting across various municipalities.
- Interacted directly with municipal users to assess operational obstacles and system problems.
- Compiled in-depth analysis reports, defect reports, and actionable recommendations for development teams and stakeholders.
- Engaged with external developers to articulate identified defects and ensure that corrections aligned with original requirements.
- Enhanced system integrity and compliance with business requirements before deployment releases.

Software Development - Meter Reading Management

Platform & Mobile Application

Transitioned to software developer role to facilitate development and improvement of internal business applications, encompassing integrated meter reading management platform and mobile application.

- Optimized web application functionality while ensuring seamless integration with mobile applications.
- Integrated REST APIs and a shared database to ensure consistent information synchronization

between web and mobile platforms.

- Streamlined workflows allowing administrators to set up routes, designate areas, and delegate meter-reading tasks to field users.
- resolved challenges affecting area mapping location specifics and directives presented to mobile users.
- Improved functionality used by administrators to manage field assignments and operational workflows.
- Analyzed and rectified reporting and analytics discrepancies, ensuring accurate display of database information in charts.
- Corrected reporting logic to ensure analytics and displayed results accurately reflected underlying database information.
- Identified and resolved application functionality discrepancies affecting user interactions and operational workflows.
- Conducted troubleshooting across application API and database layers.
- Facilitated testing and validation processes for system changes before deployment.

Web Developer & Graphic Designer

Dynamiq Business Technologies - MARCH 2022 - SEPTEMBER 2022, PRETORIA

Worked across client-facing web development, WordPress development, UI design and graphic design, delivering websites and functional digital solutions for business and client requirements.

- Created and personalized WordPress websites, featuring a specialized site for a medical practitioner.
- Developed and implemented WordPress-based booking systems in addition to various advanced business functionalities beyond conventional informational websites.
- Tailored WordPress themes, layouts, and

functionalities to meet client specifications.

- Developed responsive frontend interfaces using HTML, CSS and JavaScript.
- Developed user interfaces and website layouts prioritizing usability, navigation, and responsive behavior.
- Translated client requirements into practical website functionality and visual designs.
- interacted with clients to evaluate website functionality and design needs.
- Analyzed booking workflows and overall website functionality, resolving usability and operational concerns.
- Maintained and updated existing websites based on client feedback and changing requirements.
- Designed logos, flyers, promotional graphics and other digital marketing materials.
- Developed visual assets and supporting brand elements for websites and client projects.
- Integrated web development, UI design, and graphic design to provide comprehensive digital solutions.
